Work Experience

-
- | | | |
|--|---------------------------|----------------------------|
| Software Engineer - E4 | Meta/Facebook | Jul 2025 - Present |
| <ul style="list-style-type: none">Coordinated building AI skills and MCP integrations for internal 'Ask AI' tooling; investigators used it to surface ~\$80M in misallocated resources.Built "Continue from Phone" feature that prompts users to complete credit card setup on mobile, doubling successful card additions and generating ~\$380K in additional quarterly revenue.Implemented credit card autofill for Android, increasing successful card additions by 1.5% driving ~\$100K/month in incremental revenue.Identified and prevented a critical holiday SEV affecting 10K users, avoiding an estimated ~\$200K revenue loss during peak traffic.Diagnosed and fixed a race condition affecting ~1,000 users' gift card entitlements, implementing safeguards to prevent recurrence.Built internal AI code migration framework to safely convert 60K LOC, compressing a multi-week migration into 4 days. | | |
| Software Engineer - Contract | SMART Technologies | Aug 2024 - Jul 2025 |
| <ul style="list-style-type: none">Received the True North Award given to 8 engineers in 2024 for exceptional technical impact and product execution.Led the launch of three AI features in Lumio - image background removal, image sharpening, and one-click presentation retheming, before any competitors.Built link attachment for all object types in Lumio, enabling teachers to embed references, videos, and resources directly into any lesson element. Garnering organic posts and discussion in teacher Facebook communities at launch.Implemented right to left and rotated text for the 2D graphics engine, unlocking the RTL market which accounts for 10% of the global population most notably opening sales to the UAE. | | |
| Founder/Software Engineer | Envision Reality | Dec 2023 - Aug 2024 |
| <ul style="list-style-type: none">Envision Reality is a 3D user facing AI-assisted photorealistic interior design web-application.Created a 3D visualization engine that utilizes Gaussian Splatting for photo realistic renders.Invented deep learning point cloud gaussian segmentation algorithms. | | |
| Software Engineer | PowerN | Dec 2021 - Dec 2023 |
| <ul style="list-style-type: none">Led a cross-functional team of 12 engineers and PhDs to build CPMS, a Three.js and Django based 4D computer vision platform deployed at nuclear power plants. | | |

Technical Skills

-
- Languages: TypeScript, JavaScript, Python, C++, Java, SQL, MATLAB
 - Tools: Claude, MCP, React, React Native, Next.js, NestJS, Three.js, AWS, Docker, MongoDB

Education

North Carolina State University
Bachelor's Degree Computer Science

Raleigh, North Carolina
May 2023

Open Source Contributions

Threejs - DragControls, added rotate mode - <https://github.com/mrdoob/three.js/pull/27689>

IFCjs - Raycaster improvements - https://github.com/ThatOpen/engine_components

Lumaapi - Updated to work with aws lambda <https://github.com/envisionreality/lumaapi-python>

Awards

True North Award

SMART Technologies, Nov 2024

Awarded to those who exemplify SMART's mission. My team and I received this for implementing right-to-left text support, unlocking a market representing 10% of the world's population.

Computer Science Honors

North Carolina State University, May 2023

Graduated with a minimum GPA of 3.5 while completing a challenging program of computer science undergraduate study, including an honors thesis with a supervising professor. Worked with Dr. Lina Battestilli to write a web application for enhancing security in child care.

1st place MATLAB Cody Competition

MATHWORKS NCSU, Sep 2021

Placed first place in the MATLAB Cody competition at North Carolina State University.

Projects

Dark Factory

<https://github.com/lewibs/dark-factory>

- AI Agent harness for humans on the loop development.
- Utilizes deterministic workflows to guarantee high quality agentic output.

Tech Stack: Claude, shell, python

Ottery

<https://github.com/ottery-app>

- Childcare security system which awarded me the Computer science honors award.
- Designed and created a system for safely picking up and dropping off kids at daycares.
- Used by a local church to manage over 400 children.

Tech Stack: Nestjs, Javascript, React, Jest, Figma, Mongoose, MongoDB

Keyfile

<https://github.com/lewibs/keyfile>

- Created a DSL to simplify keyboard firmware with intuitive syntax for layers, macros, and colors.
- Developed transpiler to convert Keyfile syntax into C++ for QMK firmware.
- Is designed to allow direct compilation into binary firmware.

Tech Stack: C++, Linux, Docker, QMK

DuckTyper

<https://www.npmjs.com/package/ducktyper>

- Ducktyper is a runtime DTO validation tool to help with complexity involved with Forms and APIs.
- Created so that developers can create templates, then use those to validate input automatically.
- Heavily tested in Jest to allow for strong confidence in type checking correctness.

Tech Stack: Typescript, Jest, Node, npm
